FAITH WEAR APPAREL

ERP

Enterprise Resource Planning - Go-Live Implementation.

Prepared by: Ross Whyte – Odoo Implementation Partner

Executive Brief

The Challenge: Spreadsheet Limitations in a Growing Business

Faith Wear Apparel has reached a **critical** inflection **point**. Your business **complexity**—managing **multiple** product **lines,** CMT subcontracting, fabric sourcing, embroidery operations, and corporate client orders—has **outgrown** spreadsheet-**based** management.

- Current operational risks include:
- **Manual** data entry **errors** leading to incorrect orders or pricing
- No **real-time** visibility into **inventory**, production **status,** or **cash flow**
- **Disconnected systems** creating information **silos** across **departments**
- Inability to **scale** operations without **proportionally** increasing **administrative** overhead
- **Limited** audit **trail** and compliance documentation

The Solution: Production-Ready Odoo ERP System

Your Odoo **system** is already **configured** and **operational**—not a concept, but a **working platform** ready for **immediate** deployment. The pilot implementation has **proven** the **system** can handle:

- End-to-end **order management** from **quotation** to **delivery** and invoicing
- Complex **manufacturing** with Bills of Materials **(BOMs)** for **multiple** garment **types**
- **Subcontracting** workflows for **CMT, embroidery,** and **printing** operations
- **Automated** inventory t**racking** with **real-time** stock visibility
- **Purchase** order **management** with supplier **integration**
- Custom **FW Order Management** dashboard phasing out Google Sheets tracker

What Makes This Different

Unlike **traditional** ERP **implementations** that take **months** and cost **tens of thousands**, your system is already **built, tested, and validated** with real **FWA workflows.** This is not a sales pitch—it's a **proven solution** ready for production use.

Implementation Approach: Partnership, Not Just Deployment!

The **go-live** process is designed as a **collaborative journey** where we work **side-by-side** with your **team** to ensure **confidence**, capability, and long-term **success.**

Phase 1: System Configuration & Production Data Setup (2–3 weeks)

Hands-on collaboration to **populate** your full **product catalogue** (all garment types, sizes, colours), real supplier data, **complete BOMs,** and establish data management best practices. This builds internal capability from day one.

Phase 2: User Training & Workflow Validation (2-3 weeks)

Role-based training for **sales, production, purchasing**, and **management** teams. Real-world scenario practice with your **actual** data ensures **confidence** before go-live.

Phase 3: Parallel Run & Go-Live & Stabilization (3 weeks)

Controlled transition with daily check-ins, **immediate issue resolution**, and process **refinement. Parallel** operations **initially** to ensure **zero** disruption.

Quantified Business Value (First Year)

Benefit Category	Annual Value
Operational Efficiency Gains	$4,500
Error Reduction & Quality Improvement	$3,000
Inventory Optimization	$2,000
Risk Mitigation & Compliance	$2,000
Total Annual Value	**$11,500**

Project Investment

Component	Investment
System Configuration & Data Setup	$2,500
User Training & Documentation	$2,500
Go-Live Support & Stabilization	$3,500
Total Project Investment	**$8,500**

Return on Investment: First-year **ROI** of approximately **35%.** The **core** system **delivers** immediate operational **benefits** and establishes a **scalable** foundation. Future enhancements (API integrations, AI automations, additional modules) can be added as **business** needs **evolve**.

Decision Required

The **system** is **ready**. The question is not whether Faith Wear needs an ERP, but the risks of continuing with spreadsheets are clear. The question is:

When do we begin the transition to sustainable, scalable operations?
